

PRODUCTS

Oil & Gas flow solutions

Subsea, Topside, Special alloys, Safety flow control mechanism

Premium technology

Industry leading connectors / valves / manifolds / Monobloc's with high quality and durability

Sensors

Sensors and Industry 4.0 implementation

ENGINEERING

Norvalves

HAM-LET subsidiary for customized engineering projects dedicated for subsea and topside unique needs

PRODUCTION

Machining & Finishing

Precision turning and milling capabilities providing minimal product footprint. Electropolishing, advanced cleaning process and orbital welding

Advanced process

Advanced production and material treatment procedures

Capacity

Advanced production and logistics infrastructure including a production site in China

GLOBAL

Synergy

Global engineering and production capabilities in Israel, China, UK, The Netherlands and Norway

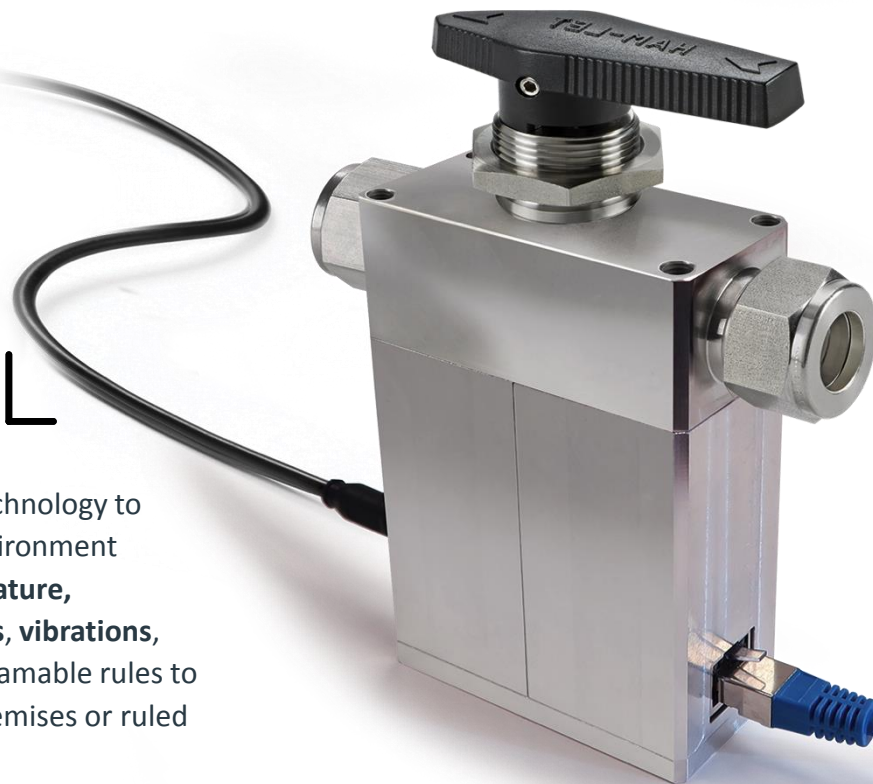

The Ham-Let IoT H800L Ball Valve

IoT H800L SERIES

The IoT H800L uses innovative technology to measure media and ambient environment through built in sensors (**Temperature, inlet&outlet pressures, acoustics, vibrations, humidity and more**), using programable rules to control remotely the valve on premises or ruled based.

PATENT PENDING

The IoT H800L Ball Valve with integrated IoT sensors and E2E solution, designed to deliver management and service solutions to improve **safety and total cost of ownership.**

- Machine learning, predictive maintenance, system improvement
- Send to user up to date reports in real time and send alarms in situations detecting abnormal operation.
- Saves installation and smart device costs.
- Easy connectivity to any PLC or cloud
