Description of the Research Team

MIGAL is very active with the Regional and National Authorities regarding the green transition. Our research team has experience in educating youngsters at schools as well as farmers. and MIGAL has several Experimental Farms where we implement the green transition, dealing in several Horizon projects) in developing methods and methodologies for carbon sequestration as well as developing and maintaining several regional Living Labs. Through those activities we can provide policymakers (as well as farmers and students) with guidance on how to address the interconnection between fostering the competences for the green transition and those for the digital transition. The department of Precision Agriculture is very much involved in research (using digital methods) and in training and has experience in Horizon project.

PROJECT IDEA / CONTRIBUTION TO THE CALL TOPIC

Your potential role

Research

Technology Development

Dissemination

Training

We would like to concentrate on sustainable agriculture and food production, and contribute to developing and assessing methods and frameworks that most effective can support farmers in implementing methodologies and in measuring readiness for green jobs and sustainable innovation. Through our activities in the Living Labs, we can support implementing digital skills and technological literacy that will support youngsters and workers for the green transition and develop education and training systems that will demonstrate the synergies between the competences for the green and digital transitions. We are equipped with the abilities to contact policymakers, education and training institutions and employers with “tools” to identify and implement skills that may advance the green transition.
