ABOUT THE COVID-19 INNOVATION CONFERENCE

<https://hopin.to/events/covid-19-innovation-conference>

As the **COVID-19 pandemic** spreads across the world, many start-ups, established companies, innovators, governmental laboratories and academic institutions are searching for solutions to end the pandemic. Their goal is to find quick solutions to treat patients and support healthcare givers, to prevent contaminations now and in the future and to build and adapt the current hospital settings. Some of them have already diverted their strategy towards a fast and practical aid, others anticipate future needs.

Cukierman & Co. Life Sciences' mission for this event is to present emerging companies and technologies that are working on any related solutions to help **fighting the coronavirus now, its potential next generation mutations, and preventing it from hurting us in the future.** We want to accelerate innovations and market reach through shared technological breakthroughs and the future pandemics to come.

Hundreds of leading global investors & strategic players are expected to participate to get exposed some of **the most promising and advanced solutions** against the COVID-19 pandemic and for future prevention needs. You will be exposed to various technologies in the plenary online session and explore equity funding and/or strategic partnering opportunities.

The companies taking part in the **2020 COVID-19 Innovation Conference** are leading start-ups in the fields of **Vaccines, Medical Devices, Biotechnology, Pharmaceuticals, Diagnostics, Robotics and Digital Health.**

As part of the initiative, Cukierman & Co. Life Sciences and GoforIsrael will lead a **donation campaign to the Technion COVID-19 Emergency Research Fund.** When registering online, each participant will have the option to donate USD 100 (or more) to contribute to the prevention and treatment research efforts.
